

## METHODS AND COMPOSITIONS FOR GALACTOSYLATED GLYCOPROTEINS

### Abstract of the Disclosure

5           This invention relates to novel glycoprotein glycoform  
preparations comprising the substantially homogenous glycoprotein  
glycoforms. More particularly the invention relates to  
substantially homogenous glycoprotein preparations comprising a  
particular Fc glycan and methods for producing, detecting,  
10   enriching and purifying the glycoforms. The invention further  
relates to immunoglobulins and especially antibodies comprising a  
CH2 domain having a particular glycan. Provided are compositions  
including pharmaceutical compositions methods of using the  
preparations as well as articles of manufacture comprising the  
15   preparations.
